

Guess what it takes to buy today's fastest tape backup system.

**Now 120MB!
plus optional Xenix®**

Usually, high performance comes with a high price tag. Usually. But not with JUMBO from Colorado Memory Systems. It's the fastest floppy interface tape drive around. And you can buy it for—you guessed it—peanuts. JUMBO is nearly twice as fast as most other drives. It puts away 10MB of data in just 5 to 6 minutes, with 40MB of storage space (60MB coming soon with the new 300-foot tape cartridges).

One model fits PS/2™, PC, XT & AT.
We've kept JUMBO simple. One model, with inexpensive internal mounting kits, works with all IBM® PS/2, PC, XT, and AT computers and compatibles. And our clamshell kit converts JUMBO to a stand-alone external drive. We've kept it easy to use, too. Intuitive software menus are so straight forward, you'll probably never

open JUMBO's instruction manual. And your data is safe. You'll typically fill 300,000 cartridges without losing a single data bit. Yes, that's cartridges.

It works with QIC-40, too.

JUMBO is fully compatible with QIC-40—the industry's new interchange standard—and offers the best support available for Novell® and 3Com® networks. All things considered, this is the fastest tape drive you can buy—along with the most inexpensive. Heavyweight performance for peanuts. Why do you think we called it JUMBO?

From the people who brought you QIC-60.

JUMBO was developed by the experienced engineering team responsible for the

QIC-60—the popular 60MB drive for PCs, XT's and AT's sold by IBM, Tandy, Tecmar, and others. With more than 60,000 QIC-60 systems in service, industry editors have rated it number one in both user simplicity and performance.
