

SUPER CALC 4

The most advanced spreadsheet brings you new features and enhancements to help you get better spreadsheet results easier. Upgrade your current version of SuperCalc to SuperCalc4 and get these outstanding advantages:

- An enhanced and expanded Macro capability makes it easy to automate repetitive and keystroke-intensive tasks. Your Execute files created with earlier versions of SuperCalc work with SuperCalc4, and you can create both Execute and Macro command files.
- Macro files can be stored on a spreadsheet or separately on disk.
- The new "Learn" capability lets you build macro files as you work. This means you can create macros without having to master a command language.
- The new "Name Ranges" feature allows areas of the spreadsheet to be given labels that can be referred to in formulas and commands. You define the range names, and an active directory of name ranges makes it easy to use this feature.
- Blocks of cells can be copied, moved or inserted, rather than just columns or rows.
- The full word menu structure gives you the choice of using the cursor to point to a selection, or entering the first letter of the word, as in earlier versions of SuperCalc.
- Multi-line headers and footers can be included in output, as well as automatic page numbering and automatic multiple copies.
- SuperCalc4 can read and write Lotus® 1-2-3® files through its new internal Import/Export capability (previously this was a separate utility, SuperData Interchange®). Files from all previous versions of SuperCalc can be read directly by SuperCalc4.
- The increased spreadsheet size in SuperCalc4, 255 columns by 9,999 rows, provides you with a work area that is larger than previous versions of SuperCalc.

Use the convenient form on the back of this page to upgrade to SuperCalc4, and start enjoying its advantages now.

System Requirements

- IBM® PC, XT, AT, 3270 PC (with APA Graphics Card) or compatible computer*
- Minimum 256K RAM (increased from previous SuperCalc versions)
- DOS 2.0 or greater**
- Two disk drives, or one disk drive and a hard disk

* For information regarding compatibility on machines other than IBM, please contact our Technical Support department at (408) 942-0522.

** Please note that SuperCalc4 is not available in CP/M™ format.

Lotus and 1-2-3 are registered trademarks of Lotus Development Corporation. IBM is a registered trademark of International Business Machines Corporation. CP/M is a trademark of Digital Research, Inc.
