

FUTUREMOUSE™

Introducing 21st Century Mouse.
MANAGER MOUSE CORDLESS.

The world's first cordless mouse designed expressly for the IBM PC family and compatibles.

21st Century Mouse

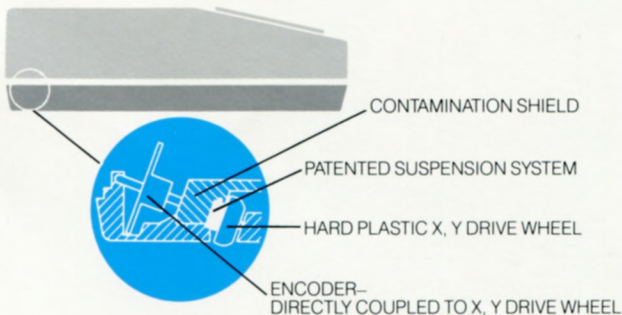

There's nothing holding you back now!

Manager Mouse Cordless. Better by design... because it eliminates the cable that binds you to your PC... and because it eliminates the often troublesome trackball, providing unparalleled maintenance-free performance.

- ▶ *No ball* means no need to disassemble and clean, ever!
- ▶ *No skipping* because the patented Manager Mouse suspension system keeps the wheels on the surface the mouse is being used on.
- ▶ *No grid pad* so it works on any smooth flat surface.
- ▶ *No tangled cables*... Manager Mouse Cordless stays put!

The patented maintenance free Manager Mouse independent suspension system.

- ▶ Obsoletes the Trackball!
- ▶ Provides positive traction on *any* flat surface!

MANAGER MOUSE CORDLESS. Preferred for...

- ▶ Desktop Publishing
- ▶ CAD/Graphics
- ▶ Project Management
- ▶ Mouse-driven Software
- ▶ All heavy use applications

MOUSEFACTS

Why MANAGER MOUSE CORDLESS has no tail.

Cables have personalities like snakes. They love to curl themselves around coffee cups and telephones. They frequently snarl with other cables, forming tangled clumps. Sometimes, they draw up and drag your mouse away from where you just left it. A cordless design means you won't have to fight for control.

How MANAGER MOUSE CORDLESS Works.

Manager Mouse Cordless uses infrared, LED technology to communicate mouse position to the host computer. The "eyes" in the front of the mouse are actually dual infrared LEDs. They work like headlights, beaming pulses of infrared light to a small receiver which converts them into RS232-compatible data and delivers it to the host computer via an ordinary serial port.

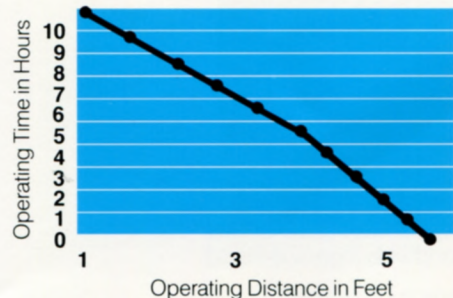

Where MANAGER MOUSE CORDLESS Power Comes From.

The mouse receives its power from high quality, rechargeable nicad batteries mounted internally. Recharging is accomplished by connecting the mouse to its power supply overnight. If necessary, it will also operate while charging. When not moved for more than 60 seconds, Manager Mouse Cordless goes into a power-conserving "sleep" mode, automatically restarting when movement resumes.

How MANAGER MOUSE CORDLESS Outdistances the Competition.

Manager Mouse Cordless operates for long periods within one to four feet from the receiver, easily enough reach for a typical workstation. The graph depicts how long the mouse can be used, without stopping, at various distances from the receiver.

Continuous Usage Graph
(Without Recharging)

The graph above reveals how many hours you can use your mouse before you have to recharge it. To find out how long you can use your mouse, simply look along the horizontal axis until you find the distance between your mouse and your receiver (you may have to estimate). Then move straight up until you intersect the curved line. Now move to the straight line to the left and read the operational time from the vertical scale. Remember that this graph was generated by moving a fully charged mouse without stopping. Your actual operational time should be much higher.

FUTUREMOUSE™

Beyond State-of-the-Art Compatibility.

Manager Mouse Cordless is specifically engineered to work with every IBM PC and compatible computers. A standard 25 pin RS 232C interface is provided for the IBM PC, PC/XT and compatibles. A 25 to 9 pin adapter is included for the IBM PC/AT and compatibles.

The MANAGER MOUSE CORDLESS Package

- ▶ Cordless Manager Mouse
- ▶ Infrared Receiver
- ▶ Mounting Strips
- ▶ 25 Pin to 9 Pin Adapter
- ▶ Power Supply
- ▶ TMouse Graphics Driver
- ▶ Comprehensive User Manual and Warrantee Registration Card
- ▶ Twelve Month Limited Warrantee
