

Saywhat?!™

**Now it's easy  
to design screens  
for any  
computer language!**

*THE* Screen Generator for the IBM PC/XT/AT & compatible family of computers...

**THE RESEARCH GROUP**

# Saywhat?! 3.0

**SAYWHAT?!** is a stand alone *all-in-one* tool for computer users and programmers which makes it easy to quickly create fantastic screens for menus, data entry, help panels, and windows.

Screens and windows can be displayed by your program written in any programming language (even batch files) with just *one* line of code, and they will *POP* onto your monitor with startling speed. It's the perfect companion tool for all versions of dBase, Turbo Pascal, and BASIC since it writes flexible data-entry code for all three. SAYWHAT?! works beautifully with popular compilers and application generators such as Clipper, WordTech, Quick Basic, Genifer, WordTech, FoxBase and Microsoft C.

**SAYWHAT?!** creates lined and unlined boxes, lets you work with 512 color combinations on color systems and whatever attributes your monochrome system allows, and gives you all the special symbols in the IBM Extended Character Set. This means that creation of *crisp, professional screens* that are a joy to use are just minutes away even for the novice screen designer.

**SAYWHAT?!** comes loaded with *free utilities* so that you can **IMPORT** screens from running programs, export screens to your favorite word processor, print screens under program control, and much, much more.

**SAYWHAT?!** is not menu-driven so you don't need a Ph.D in "menuology" to work with it. With the 68 page manual and help screens you can be a SAYWHAT?! expert in about an hour. *Free technical support*, if you need it, is just a phone call away.

**SAYWHAT?!**'s memory resident language enhancer gives your programs the magic of SAYWHAT?! screens in any program you write. It needs 27K with color video cards and 39K with monochrome cards. SAYWHAT?! works with all major co-resident software products such as SideKick, SuperKey, KeyWorks, Lightning, DeskView, and network software too!

**SAYWHAT?!** is *NOT copy-protected* and there are **NO** royalty or licensing fees to pay. (Compare that with some other screen design tools which expect you to keep paying, as much as \$60 for each application you distribute!). With SAYWHAT?!, **ALL** the screens you design are **YOURS**. SAYWHAT?! is being used by thousands, from first time novices to professional consultants and software developers.

**SAYWHAT?!** is priced to be *affordable*. It's remarkable price means that everyone can own and enjoy the magic of SAYWHAT?!. Best of all, powerful screen design is now fun. To put the pleasure back in programming, let us send your copy of SAYWHAT?! to you today!

## Features

- SAYWHAT?! screens can be displayed in any language
- Generates both full screens and windows (up to 3 layers deep)
- Adds 9 runtime screen commands to any language
- "Menuless" interface — most commands are single keys
- User modifiable help screens
- Automatic box drawing
- Paint with colors
- Block move, replicate (rubber stamping), erase
- 512 color and attribute combinations (including bright background)
- Entire IBM extended character set available
- Generates data input code with inline documentation for any version of dBASE, Turbo Pascal, BASIC
- Works with Clipper, WordTech, and QuickBasic, and all compilers.
- Walk about ('etch-a-sketch') mode
- Direct access to DOS commands
- Screen display time 0.150 seconds (or less)
- Includes 68-page bound manual, quick reference card, technical support line.
- Shipped with Clipper, WordTech, and FoxBase compilable modules.
- System requirements: IBM PC/XT/AT or compatible computer. PC-DOS or MSDOS version 2.0 or higher. IBM monochrome, CGA, EGA or compatible video card. 27K RAM needed for resident portion (39K for monochrome).
- Availability: Shipped within 24 hours of order, first class mail.

yes!

Yes, I want the best screen designer on the market, and I need it right away!
