# EzTape™

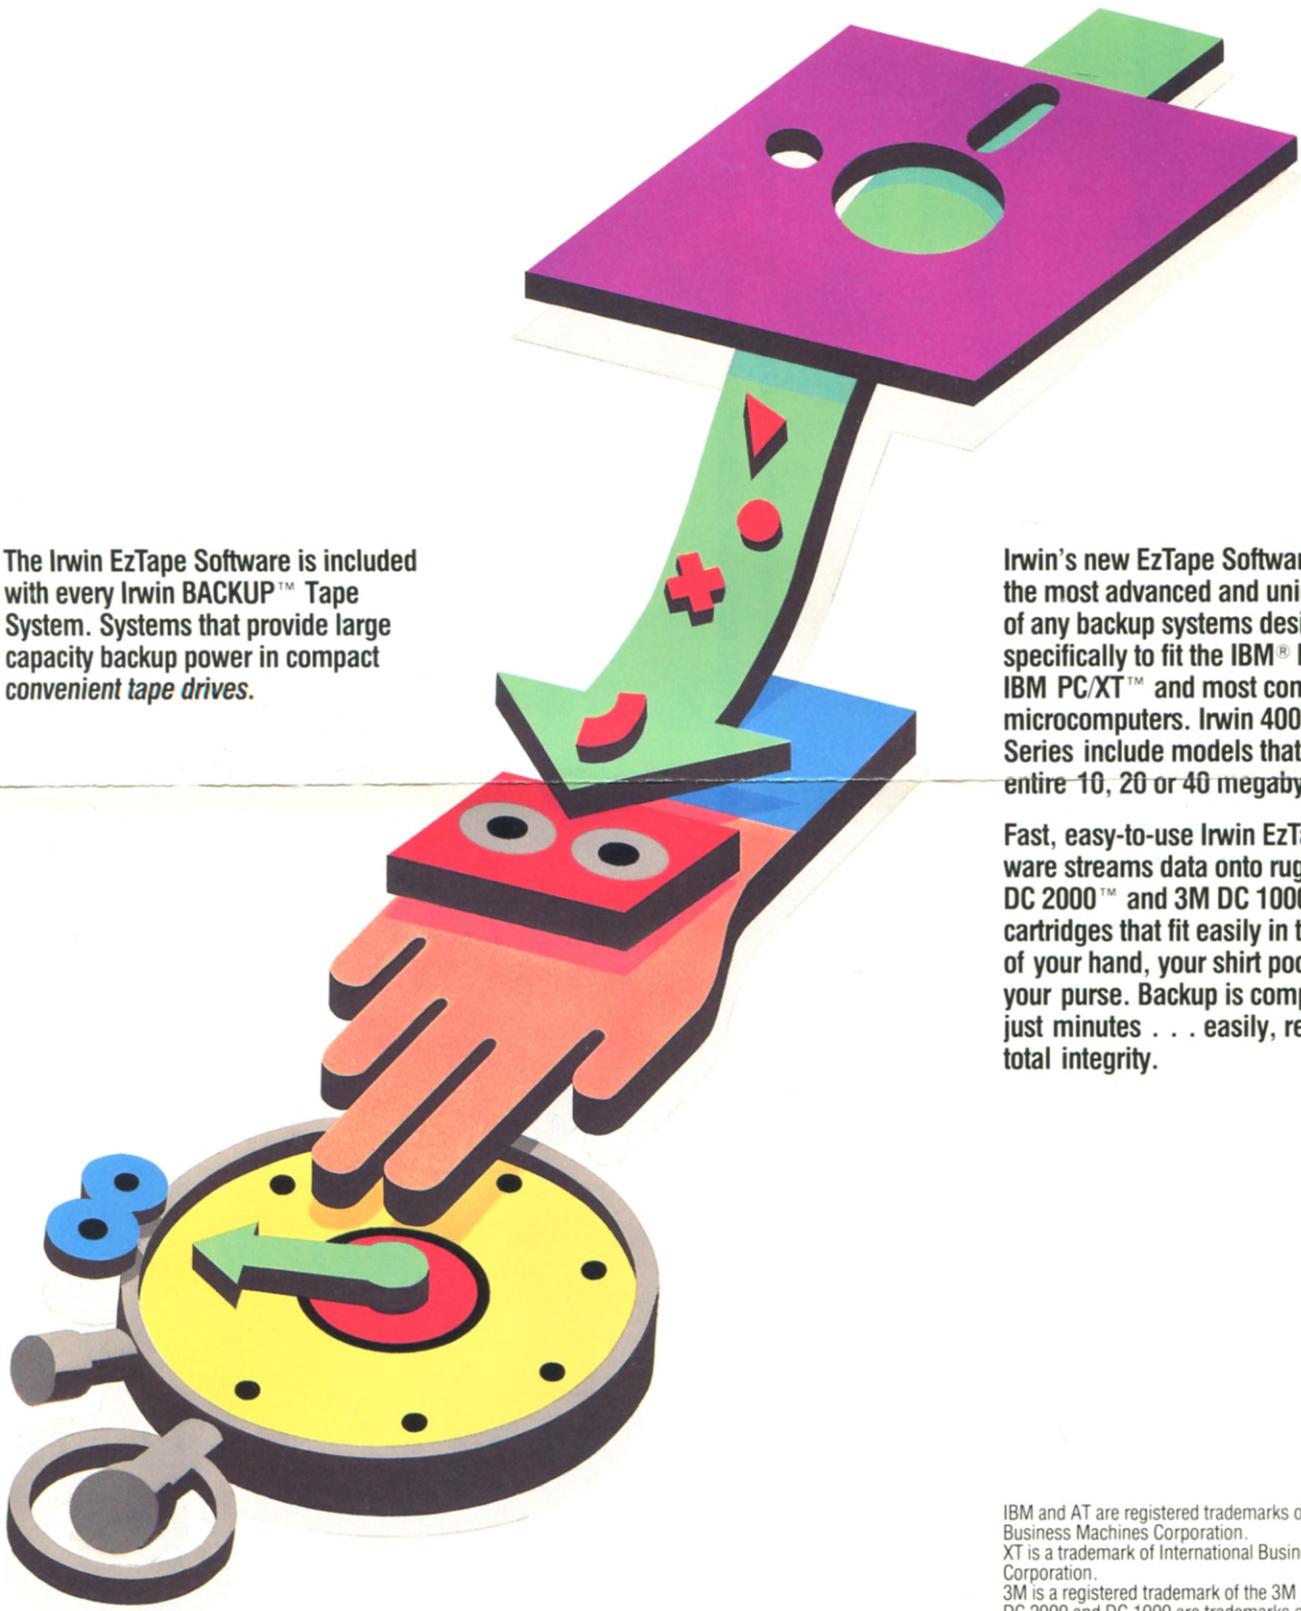

*from*  
IRWIN

The Irwin EzTape Software is included with every Irwin BACKUP™ Tape System. Systems that provide large capacity backup power in compact convenient tape drives.

Irwin's new EzTape Software provides the most advanced and unique features of any backup systems designed specifically to fit the IBM® PC/AT®, IBM PC/XT™ and most compatible microcomputers. Irwin 400 and 100 Series include models that can backup entire 10, 20 or 40 megabyte hard disks.

Fast, easy-to-use Irwin EzTape Software streams data onto rugged 3M® DC 2000™ and 3M DC 1000™ tape cartridges that fit easily in the palm of your hand, your shirt pocket or your purse. Backup is completed in just minutes . . . easily, reliably, with total integrity.

IBM and AT are registered trademarks of International Business Machines Corporation.  
XT is a trademark of International Business Machines Corporation.  
3M is a registered trademark of the 3M Corporation.  
DC 2000 and DC 1000 are trademarks of the 3M Corporation.  
EzTape and BACKUP are trademarks of Irwin Magnetic Systems, Inc.

# ADVANCED & UNIQUE FEATURES OF IRWIN EzTape™ Software

**Easy-To-Use BACKUP™.** Backing up the entire 10MB, 20MB or 40MB hard disk can be as easy as typing "BACKALL." In addition, EzTape™ lets you create other commands such as "ALLNEW," to backup all new files. Plus many more. And the same simplicity is true for restoring files.

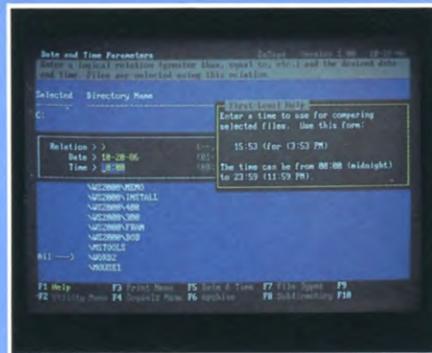

**Fast Backup:** The tape will stream when backing up files; even on the slow, older IBM PC/XT systems. If the hard disk is too slow, the tape will still stream, but will stop occasionally to allow the hard disk to catch up.

**On-Line Help:** Any time you are asked for an input, press the F1 key to get a pop-up help window with specific information on what you are to enter. If you need further HELP, press F1 again. A full window pops up containing more detailed instructions.

EzTape provides built-in documentation on every backup help screen. And after the software is loaded into your computer, you won't have to refer to the user manual ever again.

**Automatic Start:** EzTape will start automatically on any day you specify. Monday, Tuesday, Weekdays, Everyday or any specific date, (December 11, 1988), at any time (22:30). The choice is yours. This means you can back-up while completing other tasks.

**Multiple Capabilities:** You can also use multiple tapes to back-up hard disks whose capacities exceed the capacity of your tape backup unit. EzTape software tells you when to remove and insert additional cartridges. Hard disk back-up becomes practically limitless.

**A Beauty with "Brains" User Interface:** EzTape takes full advantage of color monitors and uses easy-to-understand pop-up menus. All function keys are labeled along the bottom of the screen.

**Pop-Up Windows:** By simply pressing a function key when selecting files to backup or restore, you display pop-up windows. These windows allow you to perform various tasks such as printing files, copying files, creating and removing directories, and checking the status of a tape.

**IMAGE Tape Support:** Irwin IMAGE tapes can be read by EzTape, adding the new ability of selecting individual directories and/or files from an IMAGE back-up.

**Visual File Selection:** Files are displayed on the screen using an easy-to-understand visual representation of the directories on the tape or disk. By simply moving the cursor up and down, single files, entire directories, or entire disks can be easily copied to and from the tape.

**Automatic Batch File Generation:** Once you visually specify which file you want to backup or restore, you can optionally create a batch file. Then you can simply issue the name of the batch file at the DOS prompt and the entire backup or restore operation will occur automatically.

**Backs Up System and Hidden Files:** EzTape will back-up and restore system and hidden files, restoring them to the same clusters from which they came. This allows copy-protected programs to be backed up and restored successfully.

**Easy, Yet Powerful:** Not only does EzTape make back-up easy for the occasional or novice user, it provides power users and programmers many time-saving advantages as well. For example, you can use command strings right from DOS to perform all backup functions.

**Advanced File Selection:** Files can be selected using a wide variety of methods, such as: Multiple wildcard file selections... multiple wildcard file un-selections... backed up or restored based on time and/or date...only changed files...restoring files to directories other than the one from which they were backed up. All of these options can be done simultaneously, and all can be saved in a parameter file.

## IRWIN: Superior in price and performance

There are many reasons why Irwin has the best selling BACKUP™ Tape Systems in the micro-computer industry. The most important — value! Irwin offers a family of easy-to-use, reliable back-up products, at a price designed for a microcomputer budget. See your Irwin dealer today for pricing information and a complete demonstration on the best buy in back-up — Irwin.
